At the time of log in, ELD will show a series of alerts which will be explained in detail later on. The first alert that displays is the synchronization the ELD performs with the server, downloading the driver information.

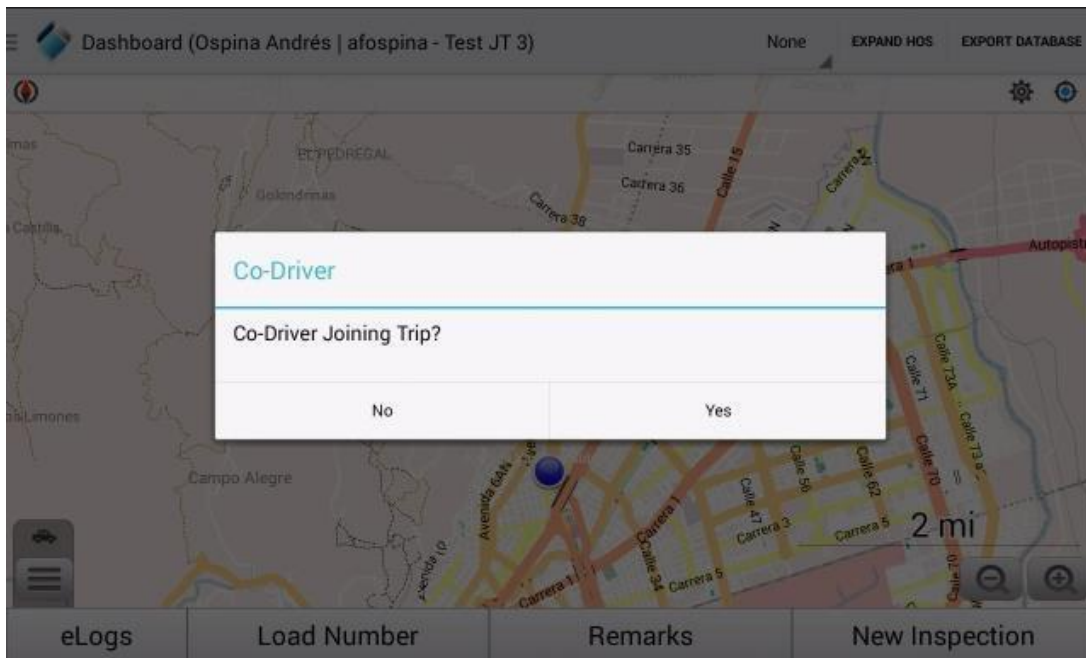

This alert is displayed only if there are records not assigned to drivers, which are stored under the profile unidentified and can be viewed in **Unassigned Logs**.

This alert is always shown on log in and if there are driver records pending to be approved. More information on Approve.

This alert is shown if a Co-driver needs to be added. More information on Co-Driver.

2 MODULES

2.1 WORK ORDER

Linked with the online application TSOmobile.net, Work Order module let you received created online work orders and manage them by changing the statuses whenever you need to, and get proof of completion with driver's signature. Some of the statuses included are: Sent, Read, In Route, Arrived, Canceled, Completed, Pending & many others.

2.2 MESAGGING

Messaging module let you send and receive messages with your driver of any company employee. This will give you productivity by not having to use different devices for different operations. Just stay on your Android device and communicate with your driver right from the same InCabin application. All incoming messages are saved in the inbox, and the outgoing in the outbox.

2.3 INSPECTIONS

Compliant with FMCSA inspection regulations, the Inspections module will automatically display when they need to be filled, requiring driver's signature for proof of completion. These logs can then be reviewed at a later time.

2.4 ROUTES

Routes module let you received routes created from the online application, providing stops' information and turn-by-turn directions. Stops can be created based on work orders and many other indications. Routes can be optimized to provide the most efficient way to reach the destinations.

2.5 FUEL PURCHASE

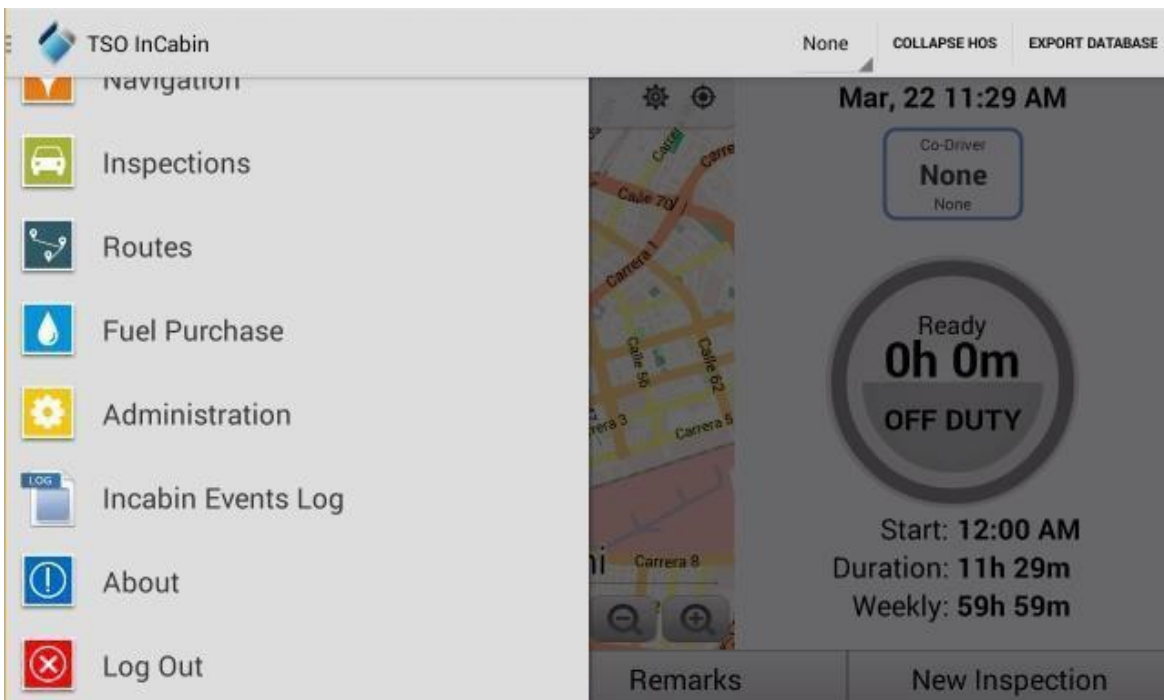

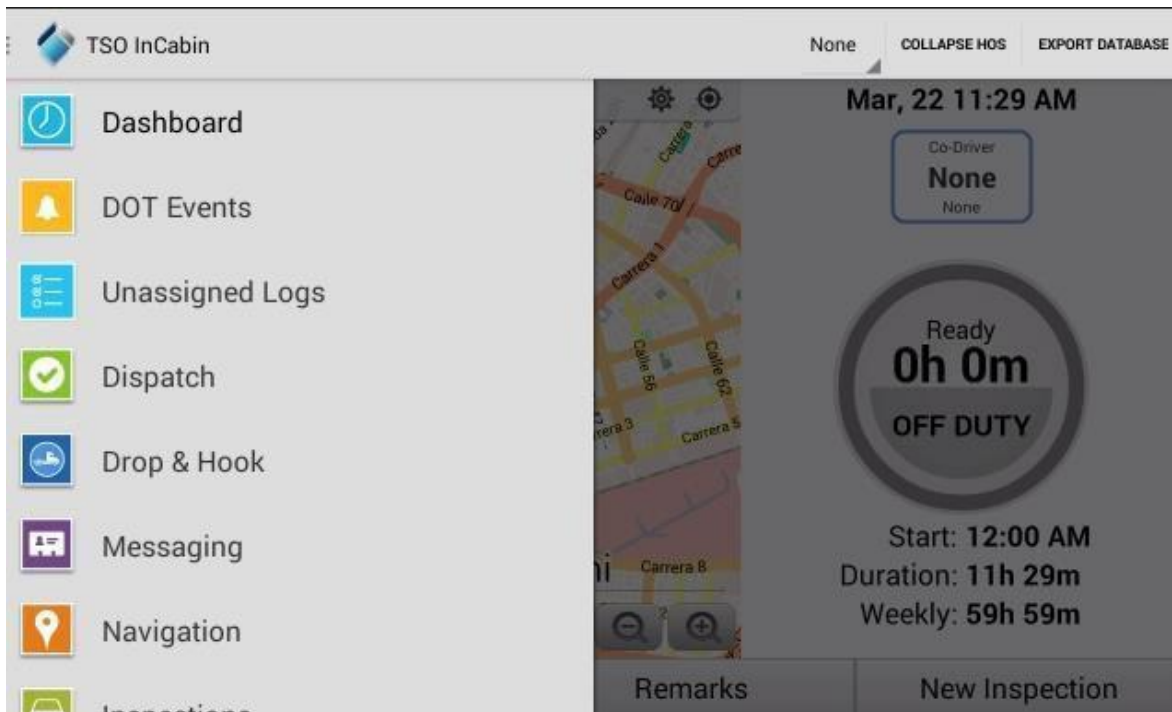

Fuel Purchase module let you gain control over the fuel loaded in the vehicle. Every time a driver is loading fuel, the GPS of the Android device will automatically gather the location where the vehicle is being fueled as well as the date and time. On top of that the driver will have to enter information of the type of fuel, gallons loaded and total money spent. All this information will be saved in your fuel logs history to which you will always have access for monitoring. Also, you can access the fuel usage reports on the online web application TSOmobile.net to get analytics about fuel consumption on your fleet.

3. DASHBOARD

The Dashboard includes the following:

- 1) A map.
- 2) A menu on the left side.
- 3) An expandable window called HOS on the right side.
- 4) Four tabs at the bottom which are: **eLogs, Load Number Remarks and New Inspection.**
- 5) Two buttons at the top which are impacting driver and **Collapse** and **Expand HOS.**

2.7 LEFT MENU

2.7.1 DASHBOARD

Main Menu

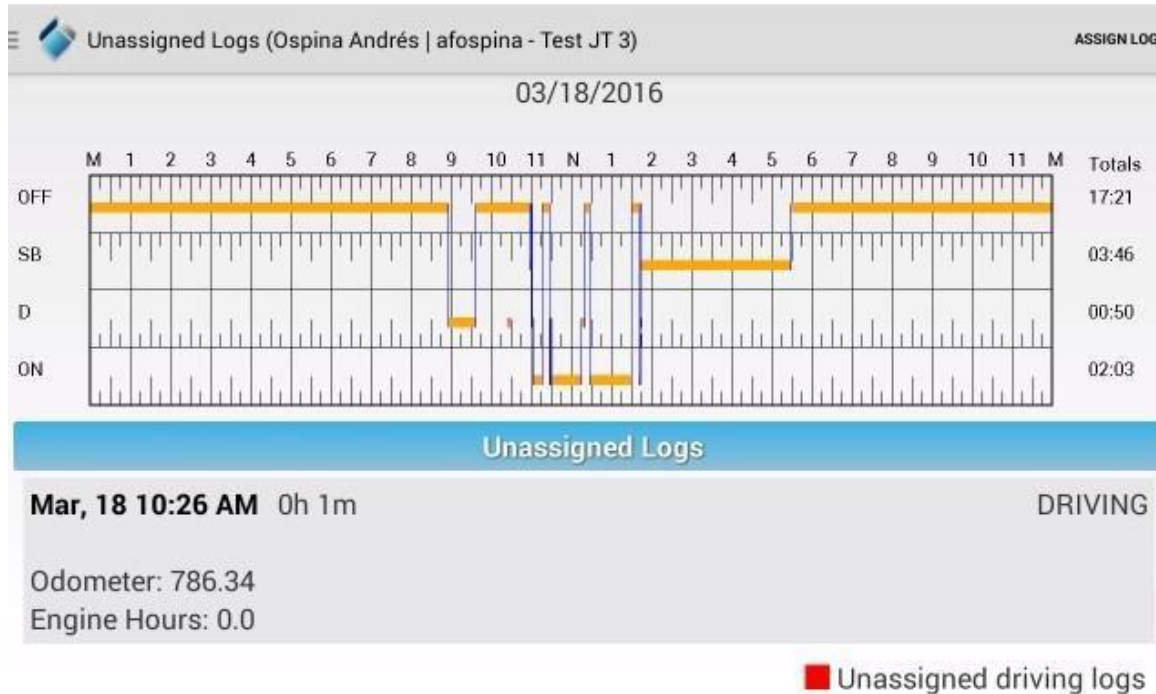

2.7.2 DOT Events

Here are all the events of the Department of transportation that have been recorded from the moment in which InCabin was implemented, such as: **Log in**, **Log out**, change of status, impacting driving category. These records include an **ID**, **date and time stamp** in which the event was recorded, **Odometer**, **Engine hours**, location in which the event was recorded and any reviews.

2.7.3 UNASSIGNED LOGS

When no driver has Logged in the ELD and the vehicle is in motion, the ELD will store travel records (Status **DRIVING**) under the profile of unidentified driver (**Unidentified**), these records can be visualized by a driver or **Unassigned Logs** field support staff, so that they can later be added to the desired driver.

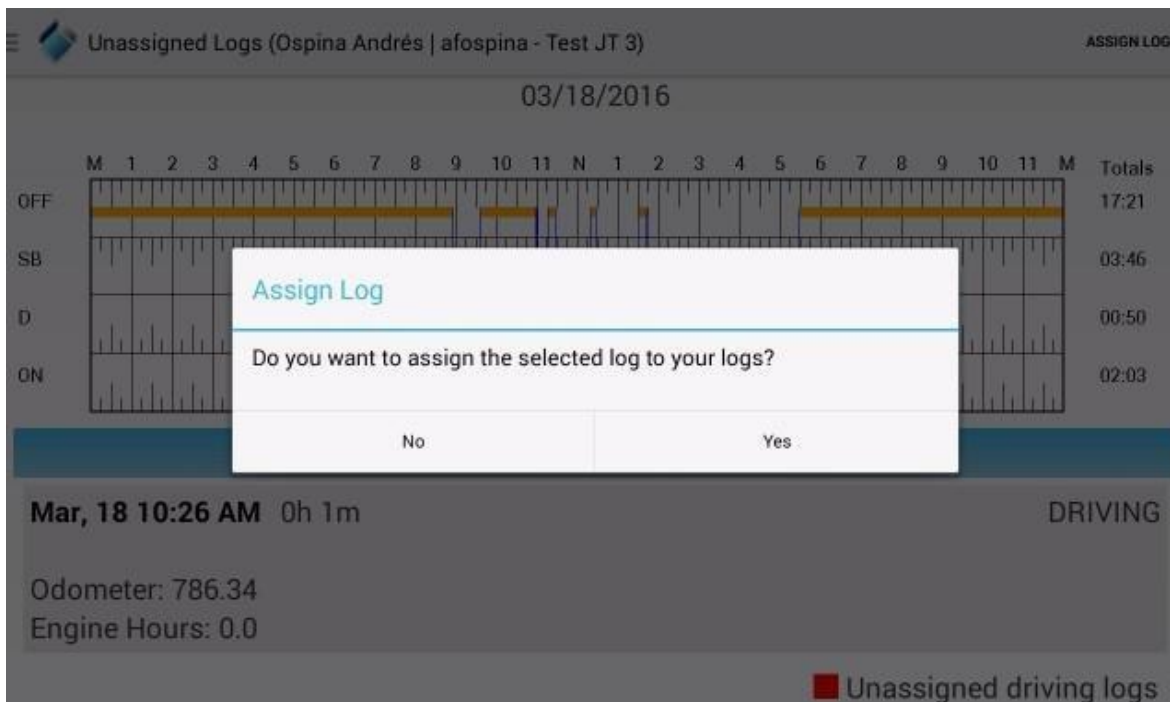

To assign a driver to an **Unassigned driving log**, simply press on the top **ASSIGN LOG**.

■ Unassigned driving logs

Following, a box will pop up stating if you would like to add the registry to yours, once you select **YES** the **ELD** will assign the registry and it will no longer show in **Unassigned Logs**.

2.7.4 DISPATCH

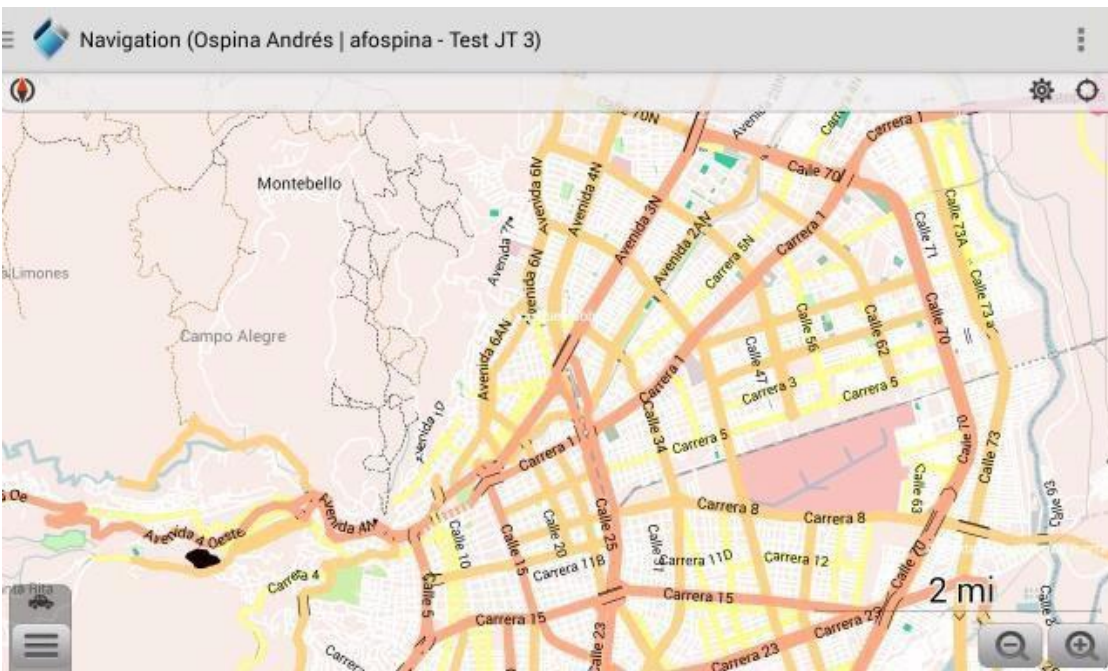

2.7.5 DROP & HOOK

2.7.6 MESSAGING

Messages that have been sent by the motor-carrier from the web application, are displayed in this space, and you are allowed to send messages and respond.

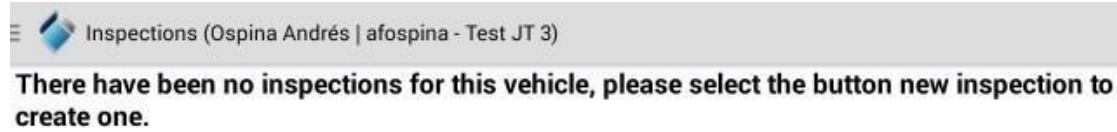

2.7.7 NAVIGATION

Navigation allows us to access the map and have a wider view of is.

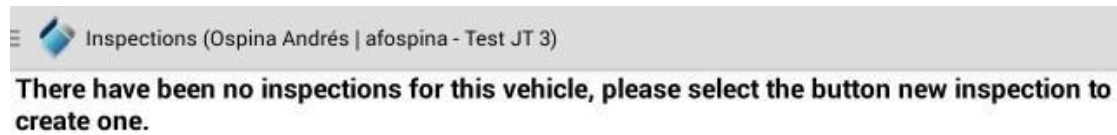

2.7.8 INSPECTION

It allows us to carry out the inspections required by law of the vehicle, as well as display which made.

New Inspection

New Inspection

A list of options which mark is the boxes according to vehicle status, once will appear full options, inspection must be signed by the driver and the reviewer, so you select each of the buttons in the image.

2.7.11 Administration

2.7.12 About

It displays the information about the implementation InCabin.

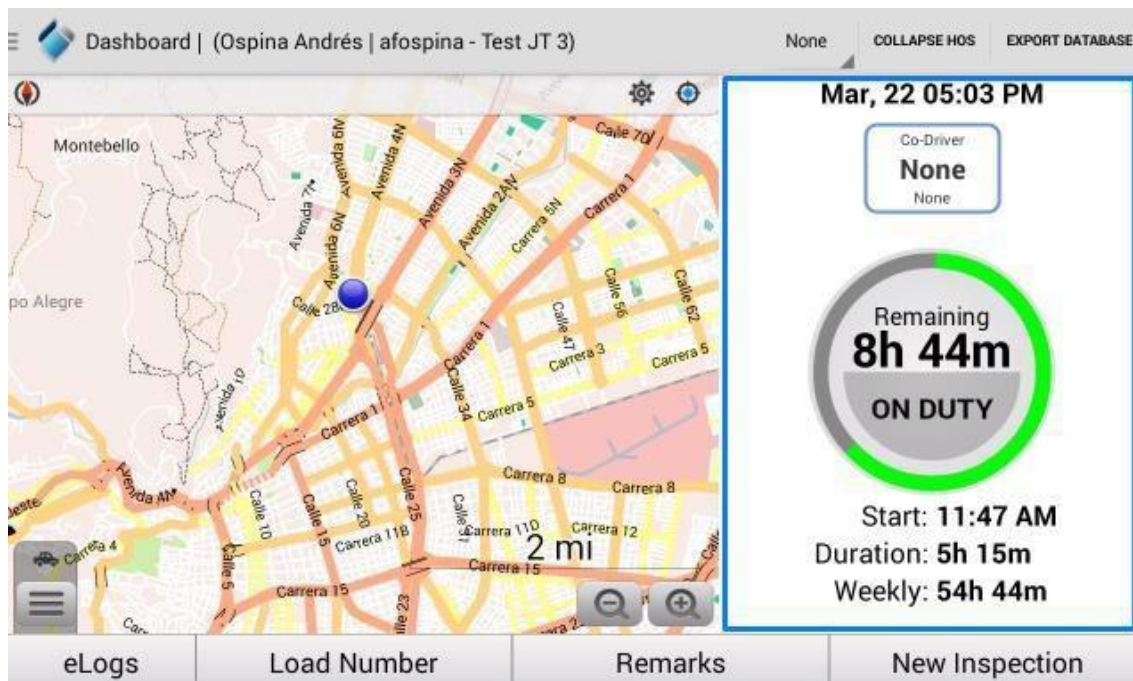

2.7.13 Log Out

Closes the session for the current user in the ELD.

3.3 HOS

Compliant with Federal Motor Carrier Safety Administration (FMCSA), Hour of Service module let you have control over the drivers' hour. Some of the functionalities are:
 Drivers can manually change their status or the system can do it automatically when detecting movement from the vehicle. Driver status will automatically end according to regulations.

3.3.1 Status

There are four states of service that must be considered, which are:

OFF DUTY this State is when the driver is not working, IE is out of service.

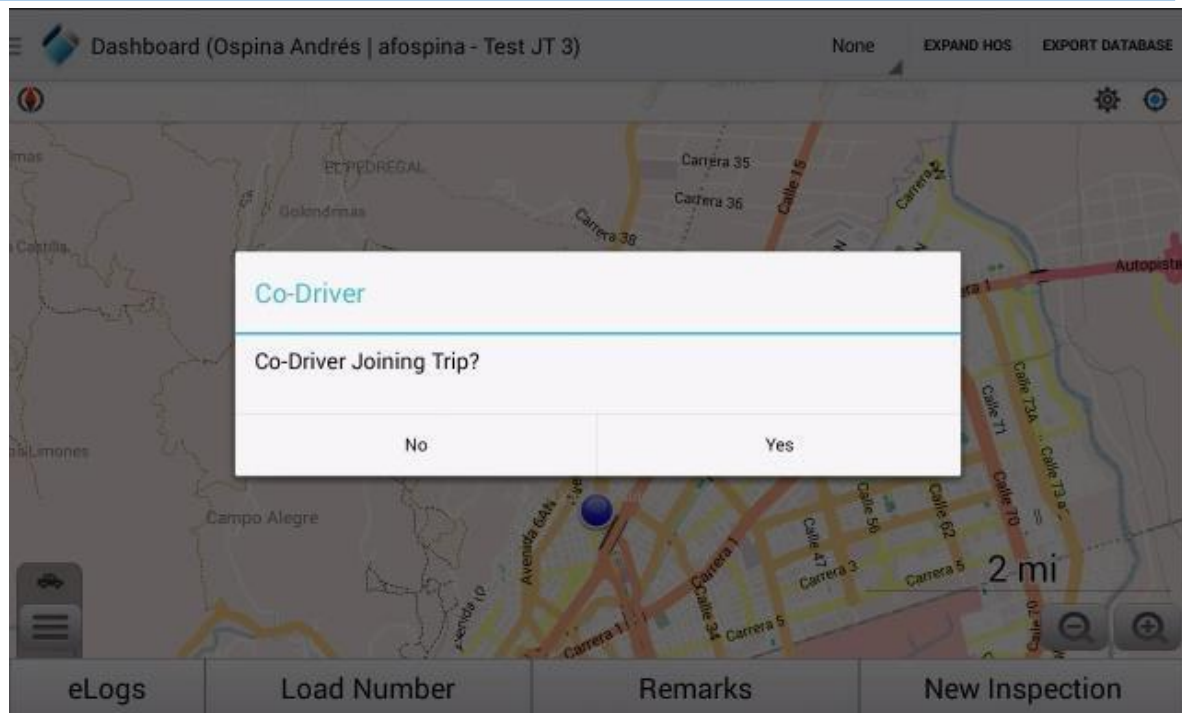

SLEEPER this state when the driver is resting or sleeping.

DRIVING this State is when the driver is driving.

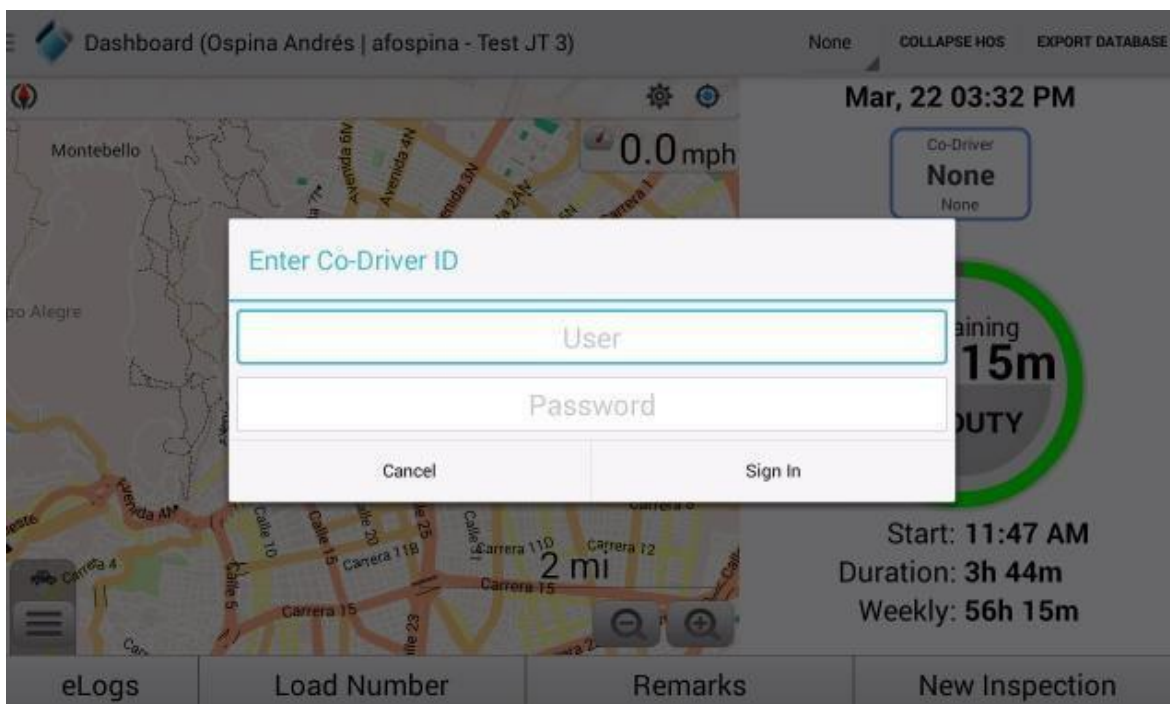

ON DUTY this State is when the driver is in service.

3.3.2 Co-Driver

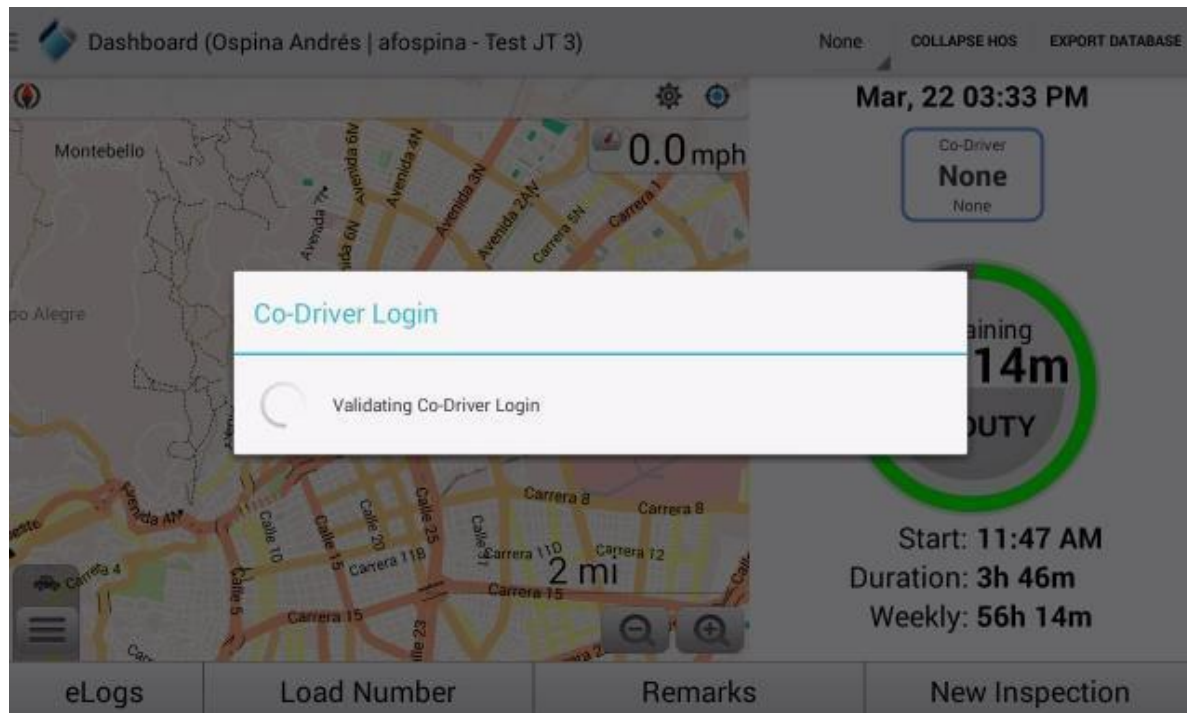

There are 2 ways to add a Co-Driver to the ELD, the first is to sign the Driver in and a box appears asking if you want to log in.

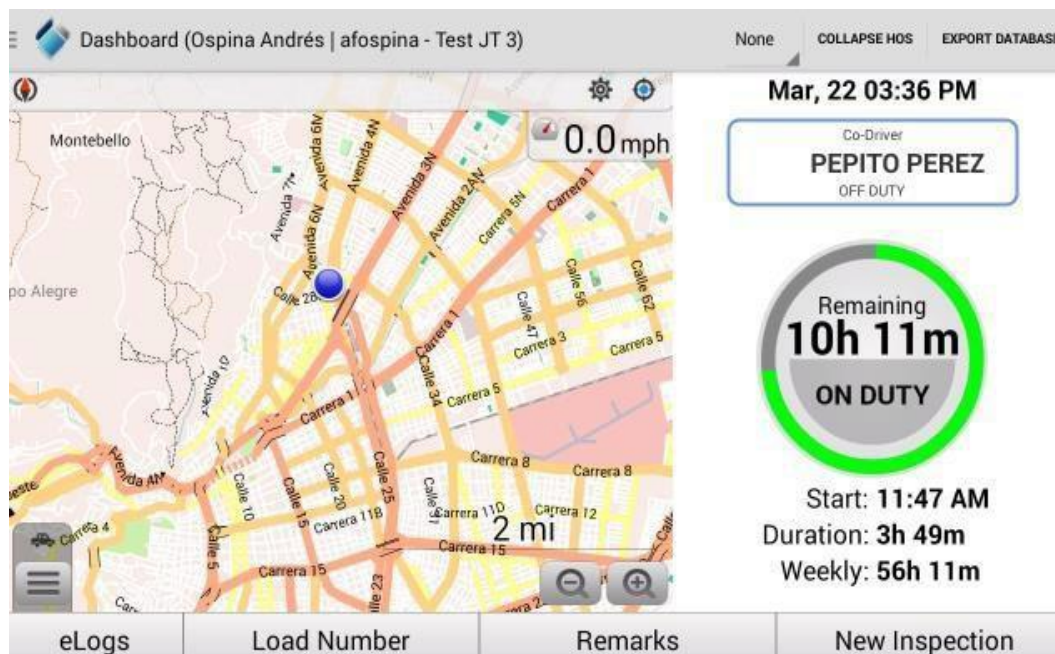

Another box will appear, in which the Co-Driver's credentials must be entered, will once you press yes.

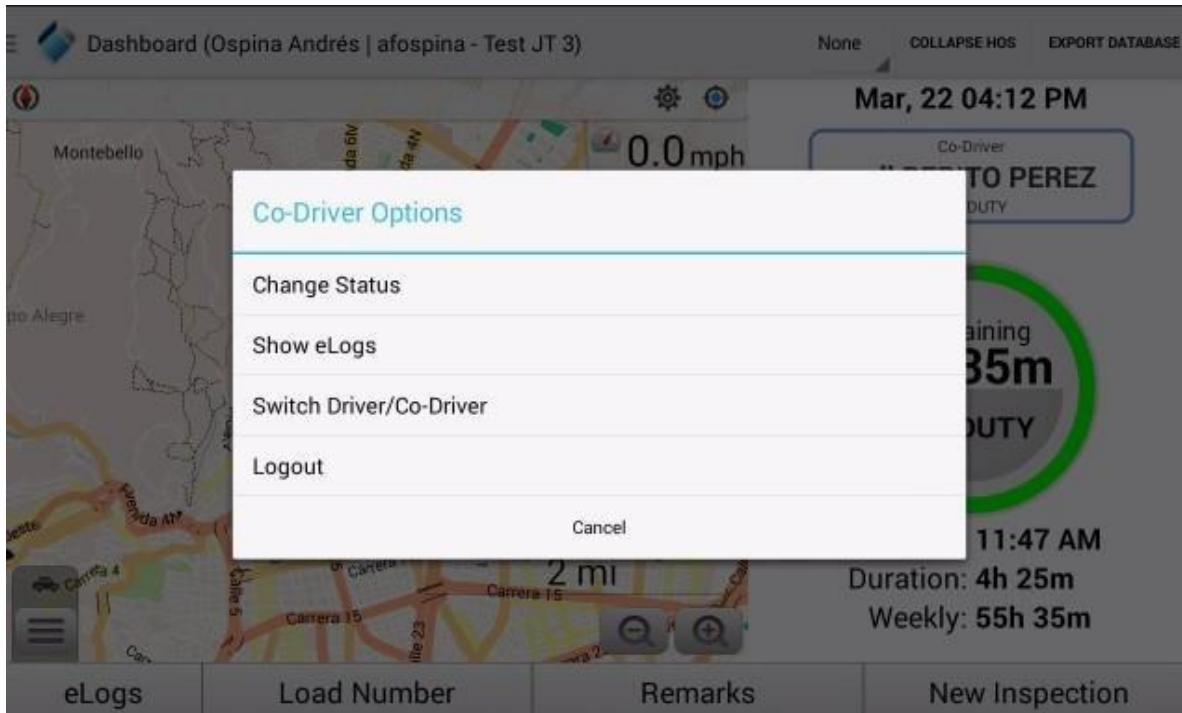

Once validated information the name of the Co-Driver will be shown in the box with the State that he already is such as **OFF DUTY**, **SLEEPER**, **DRIVING** or **ON DUTY** (see Status).

The Co-Driver has some options which can be displayed by pressing on the Co-Driver box these options are:

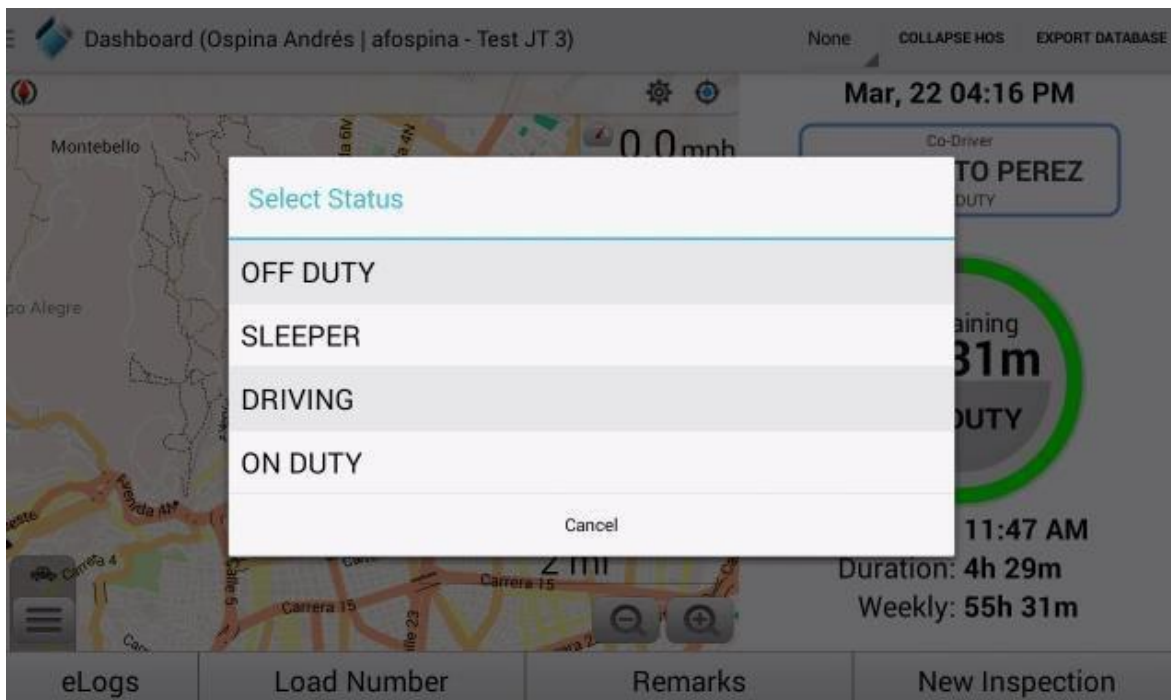

Selecting this option shows a box with States (Status), and allows you to change the status of the Co-Driver with some of those States.

3.3.2.1 Change Status

When you select one of the States, this will be reflected in the Co-Driver Box.

3.3.2.3 Switch Driver/Co-Driver

This option allows you to toggle the Co-Driver with the Driver, selecting this option displays a box in which it requests confirmation of the change to make.

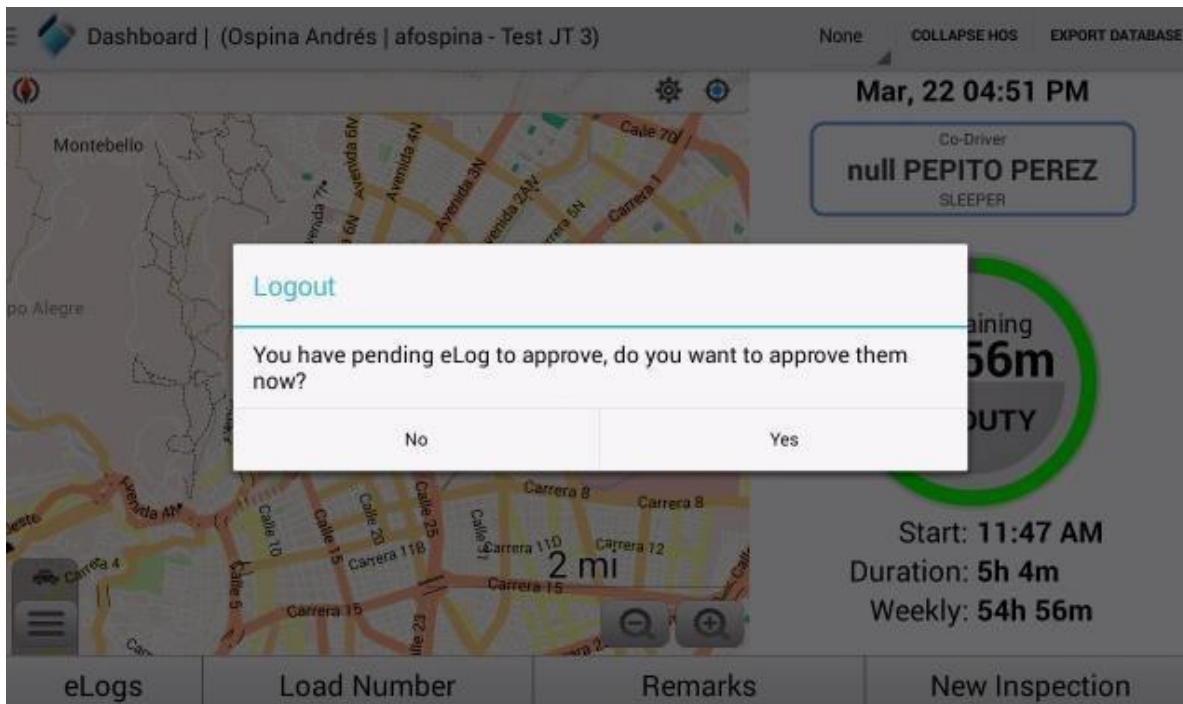

By selecting the option YES ELD proceeds to make the change and displays a success message on the screen, in this mode the Co-Driver would become the Driver and therefore has all the options available to the Driver.

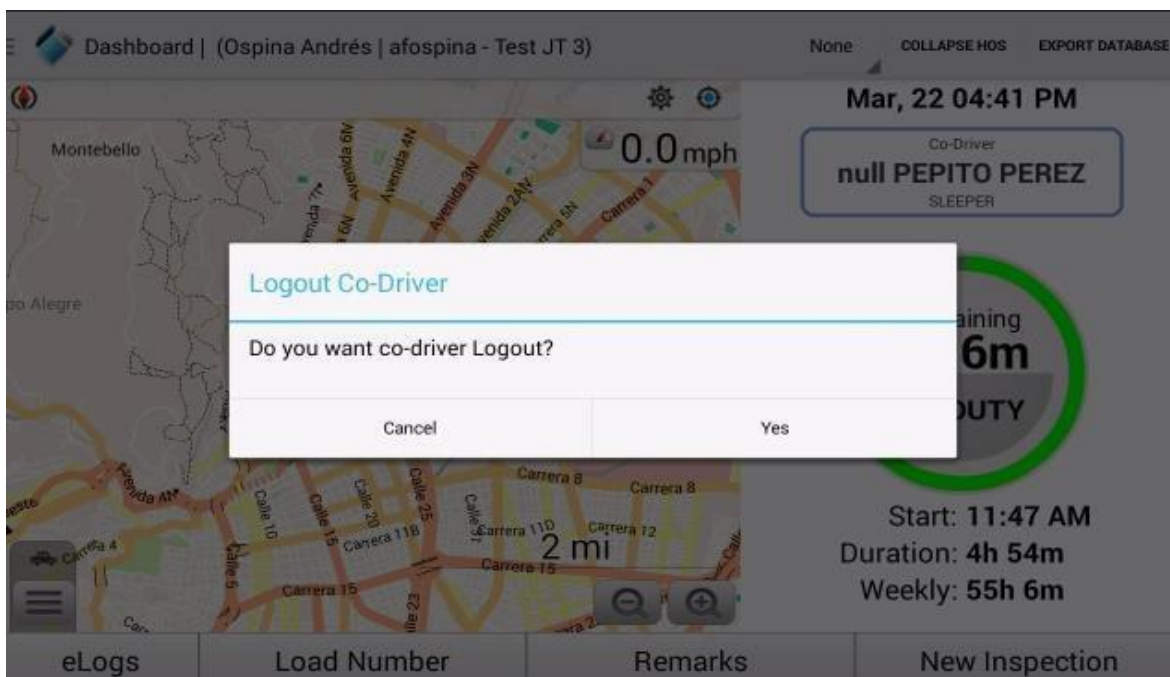

3.3.2.4 Log out

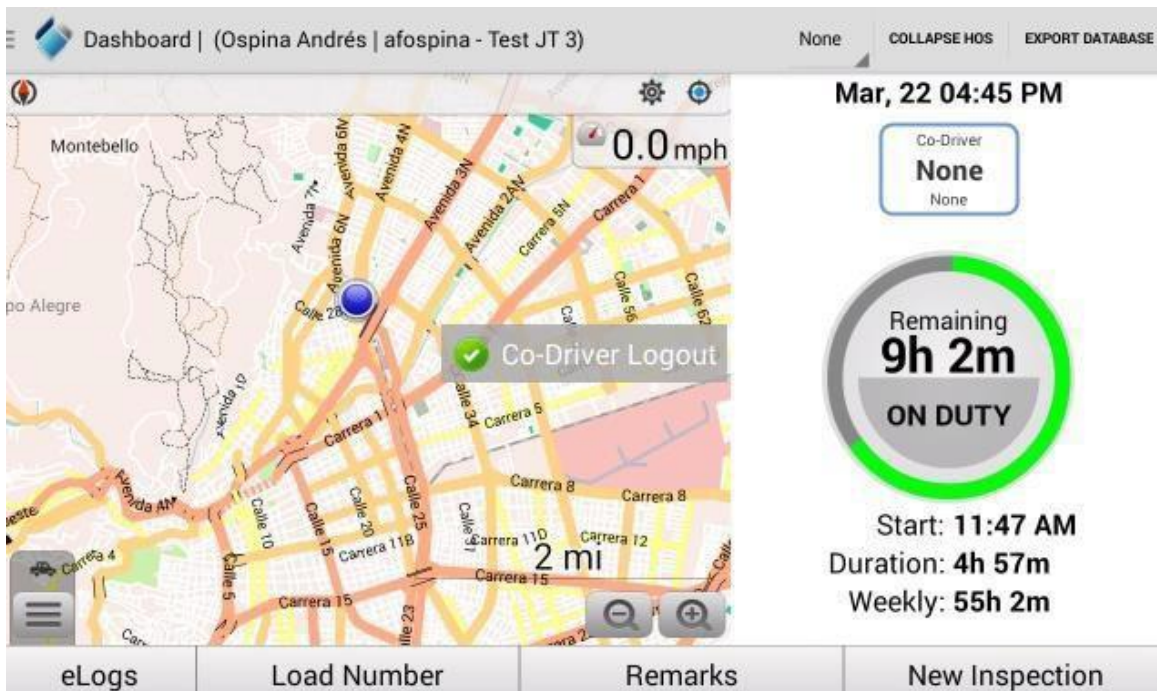

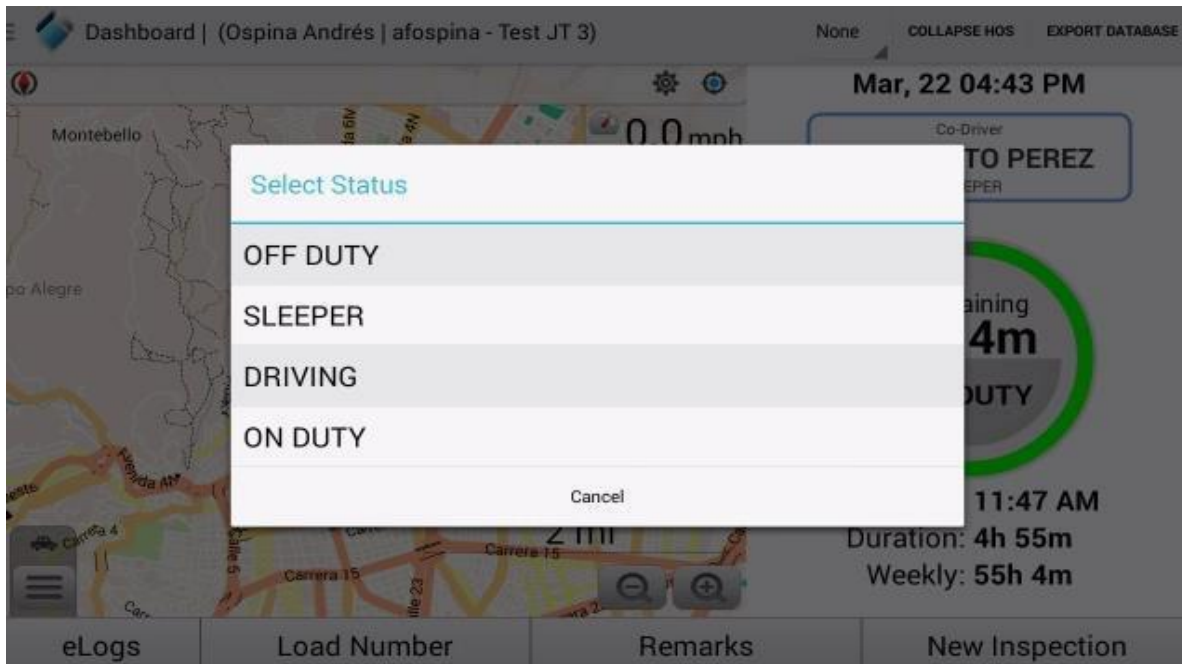

Selecting this option will have a box appear which prompts you to approve the pending Co-driver records be approved, once the approval has been done.

Once the approval of pending records has been completed, a window will be shown asking if you want to log out of Co-Driver.

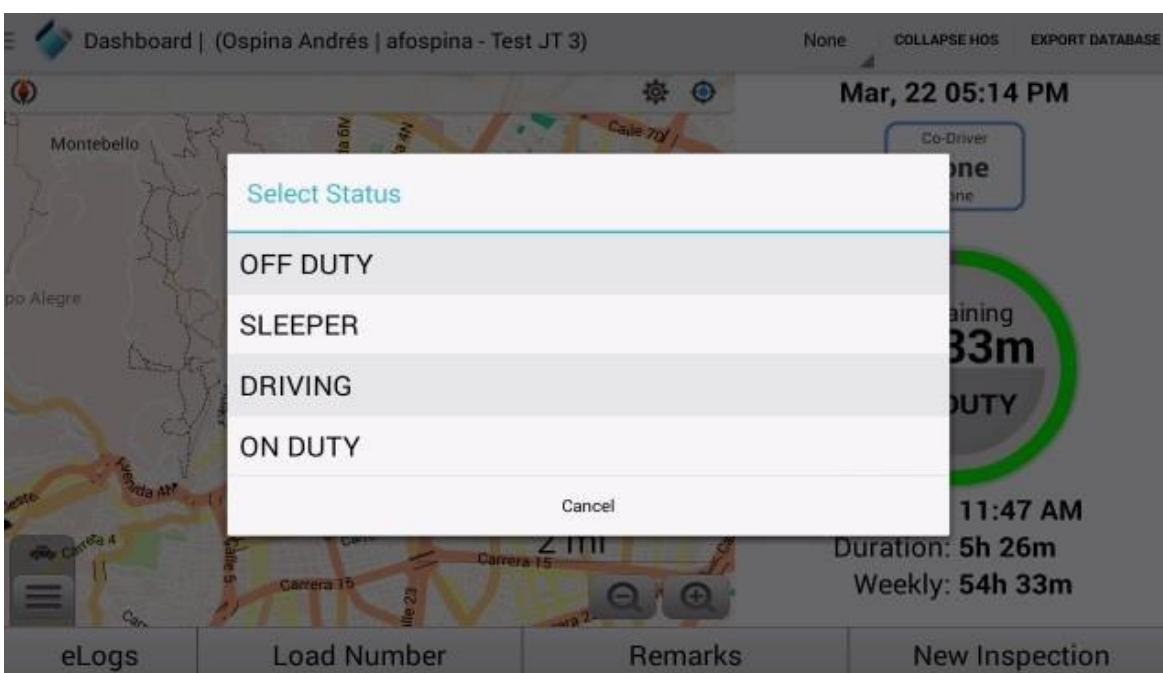

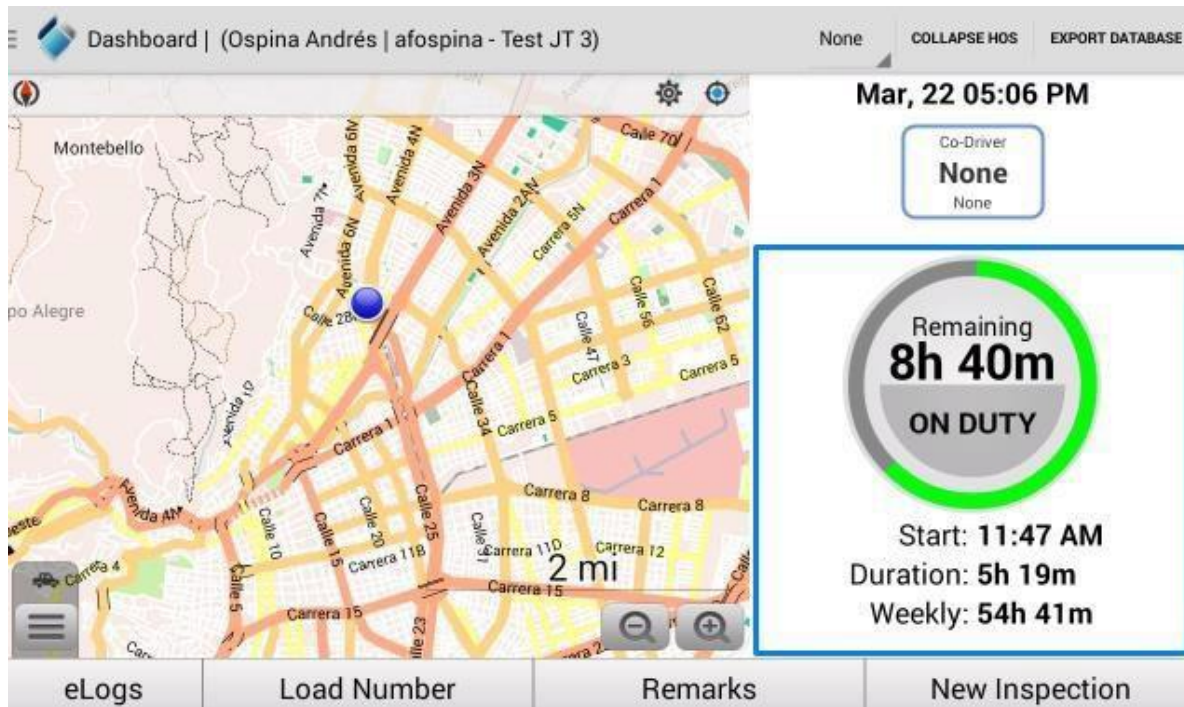

Finally the State is changed and information with respect to that State as the time remaining on the current day is displayed, also you can see the time that the State **ON DUTY** was begun, the duration which leads in that State since he transferred to it and the remaining week time **ON DUTY**.

3.3.3 Change Status

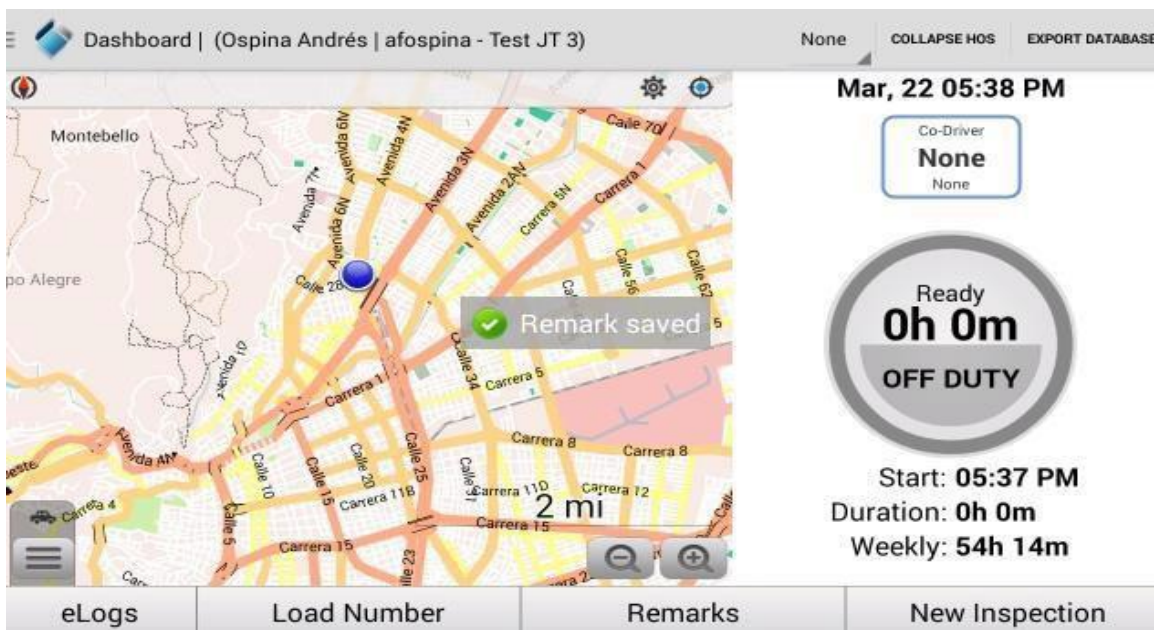

Finally the State is changed and information with respect to that State as the time remaining on the current day is displayed, also you can see the time that the State ON DUTY was begun, the duration which leads in that State since he transferred to it and the remaining week time ON DUTY.

3.3.3.1 OFF DUTY

Selecting the option of State OFF DUTY will show a window which lets you select a comment if desired by the Driver.

If you select any of the observations, a message indicating that the observation was saved successfully will be displayed, also you can see the time that State OFF DUTY was selected, the duration that it has been in that State since he changed to it and the time ON DUTY for the remaining week.

The screenshot displays the TSO Mobile application interface. At the top, the dashboard header shows the user's name 'Ospina Andrés' and the test ID 'afospina - Test JT 3'. The main area is split into two sections. On the left is a map of a city street grid with a blue location pin and a green checkmark overlay that says 'Remark saved'. On the right is a status panel for 'Mar, 22 05:38 PM'. This panel includes a 'Co-Driver' field set to 'None', a large circular gauge showing 'Ready 0h 0m' and 'OFF DUTY', and a summary of times: 'Start: 05:37 PM', 'Duration: 0h 0m', and 'Weekly: 54h 14m'. At the bottom, there is a navigation bar with four buttons: 'eLogs', 'Load Number', 'Remarks', and 'New Inspection'.

3.3.3.2 SLEEPER

When Sleeper State option is selected, a message that the State was changed to Sleeper correctly. Also you can see the time that home State SLEEPER has been selected, the duration that it has been in that State since and the time ON DUTY for the remaining week.

Approve All			Sign Logs	

A box in which the driver must place his signature will appear.

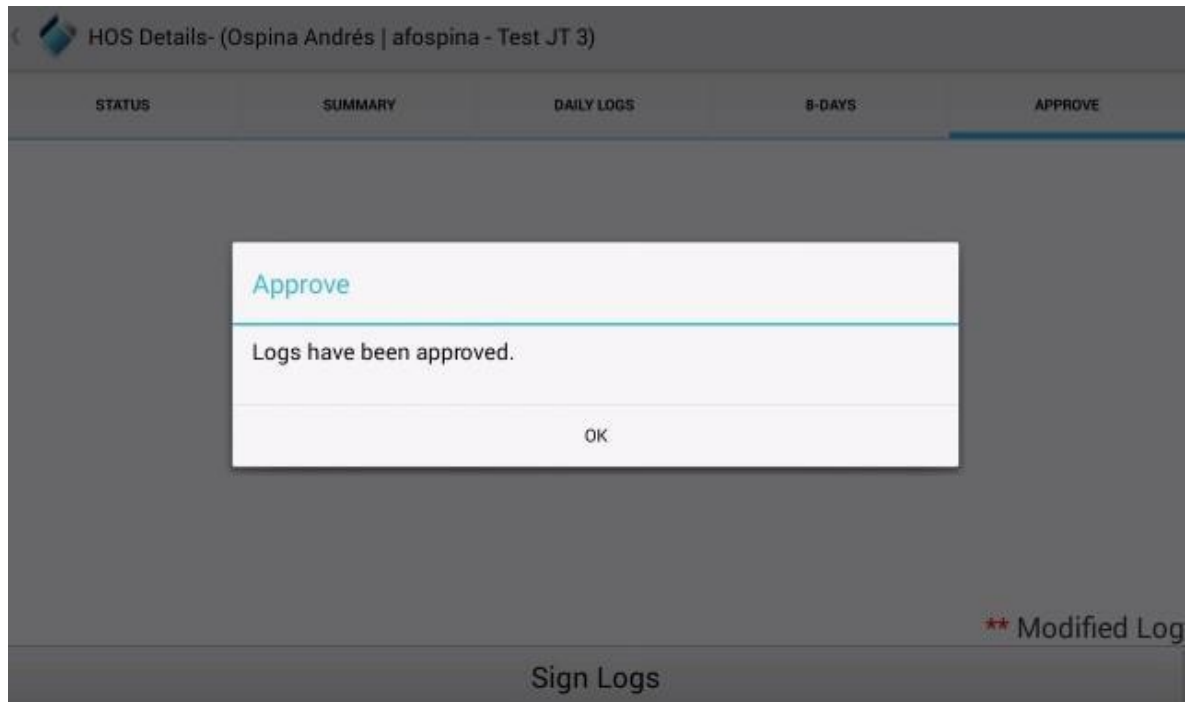

The screenshot shows the 'HOS Details' screen for 'Ospina Andrés | afospina - Test JT 3'. The 'APPROVE' tab is selected. A signature box is overlaid on the screen, containing a handwritten signature. Below the signature box are three buttons: 'Cancel', 'Clear', and 'Save'. The background shows a list of duty status entries: 'ON DUTY' (0h 0 m), 'OFF DUTY' (0h 6 m), 'ON DUTY' (0h 0 m), and 'SLEEPER' (0h 0 m). At the bottom, there are two buttons: 'Approve All' and 'Sign Logs'.

Press the Save button, then the signature will be stored and you must only press the button Approve All, a box appears which certifies that the approved records are correct, are accepted and are already certified.

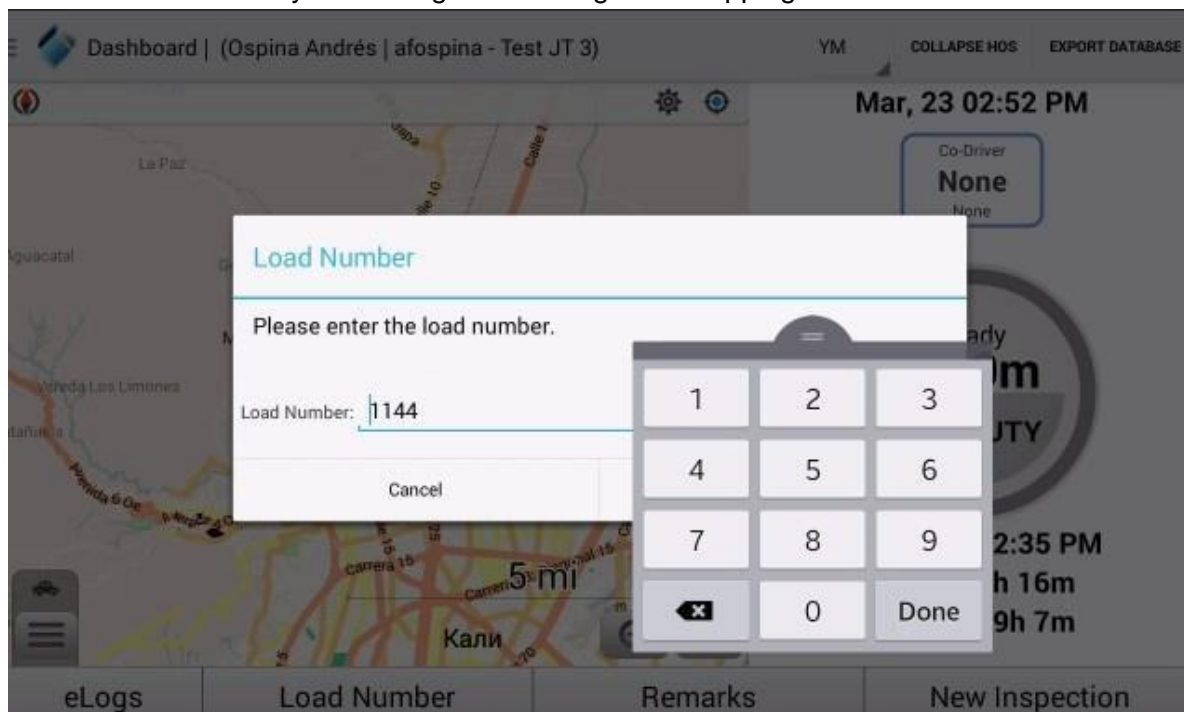

The screenshot shows the same 'HOS Details' screen, but now a 'Confirm' dialog box is displayed. The dialog box contains the text: 'I hereby certify that my data entries and my record of duty status for this 24-hour period are true and correct.' Below this text are two buttons: 'Not Ready' and 'Agree'. A blue arrow points to the 'Agree' button. The background shows the same list of duty status entries and the 'Approve All' and 'Sign Logs' buttons at the bottom.

Once the pending records are approved, these will disappear from the Approve window.

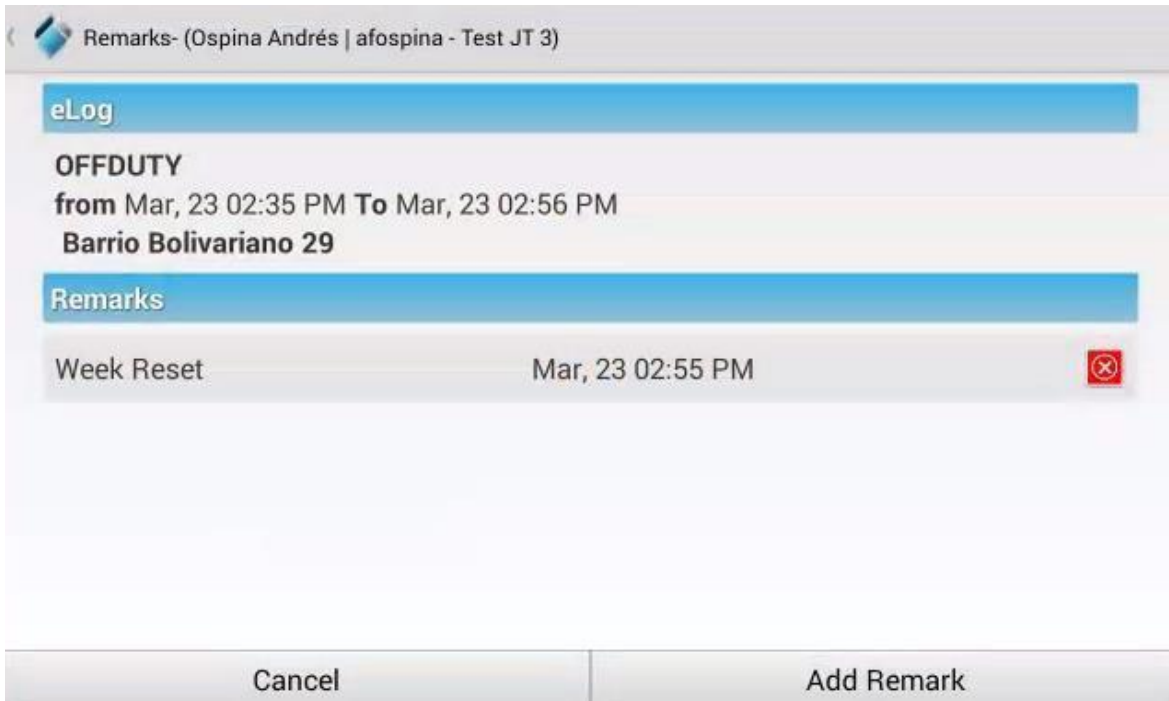

3.4.2 Load Number

Load Number allows you to assign and change the Shipping Number.

3.4.3 Remarks

4 DRIVER EXEMPT

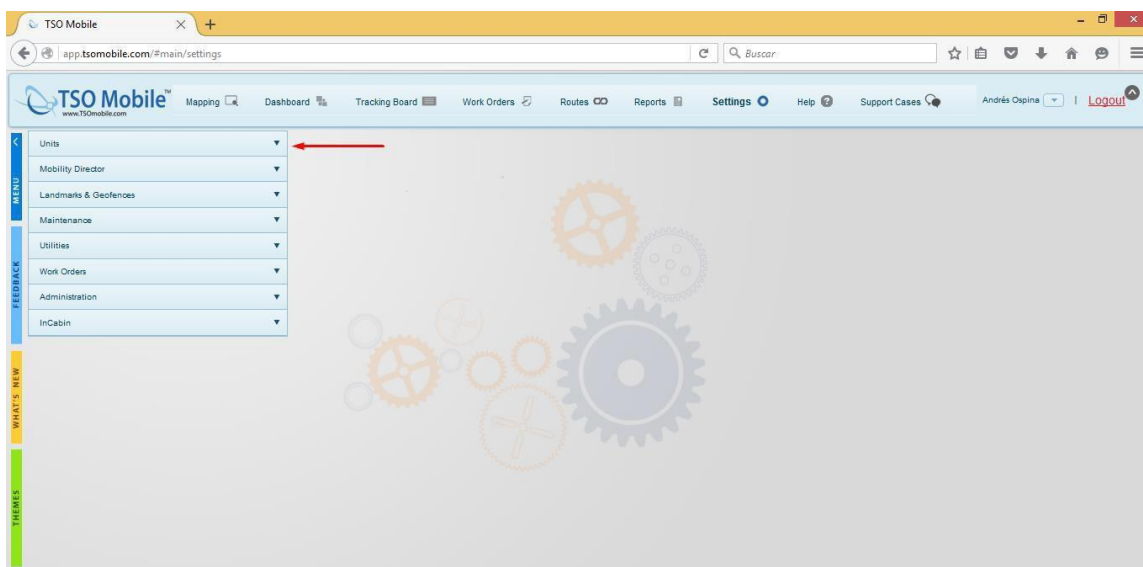

The Driver Exempt can only observe information on the ELD and cannot generate any logs, this Driver is exempt from recording records in the ELD.

Below is an instructional on how to create a “Driver Exempt”:

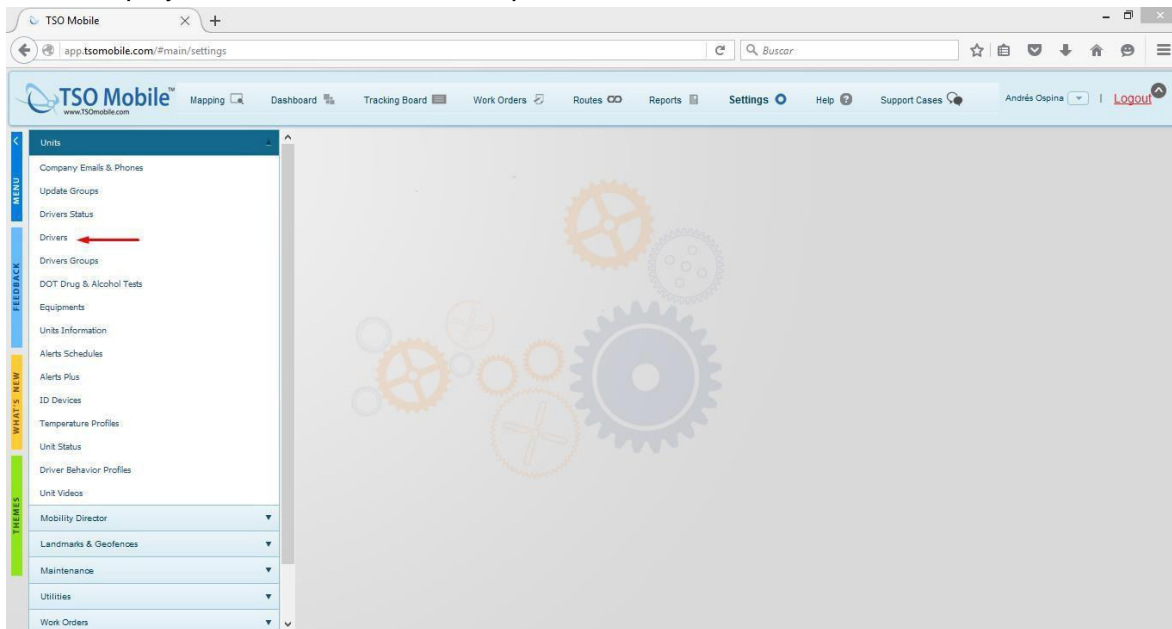

You must login to the web application with your user credentials, following, select the settings option.

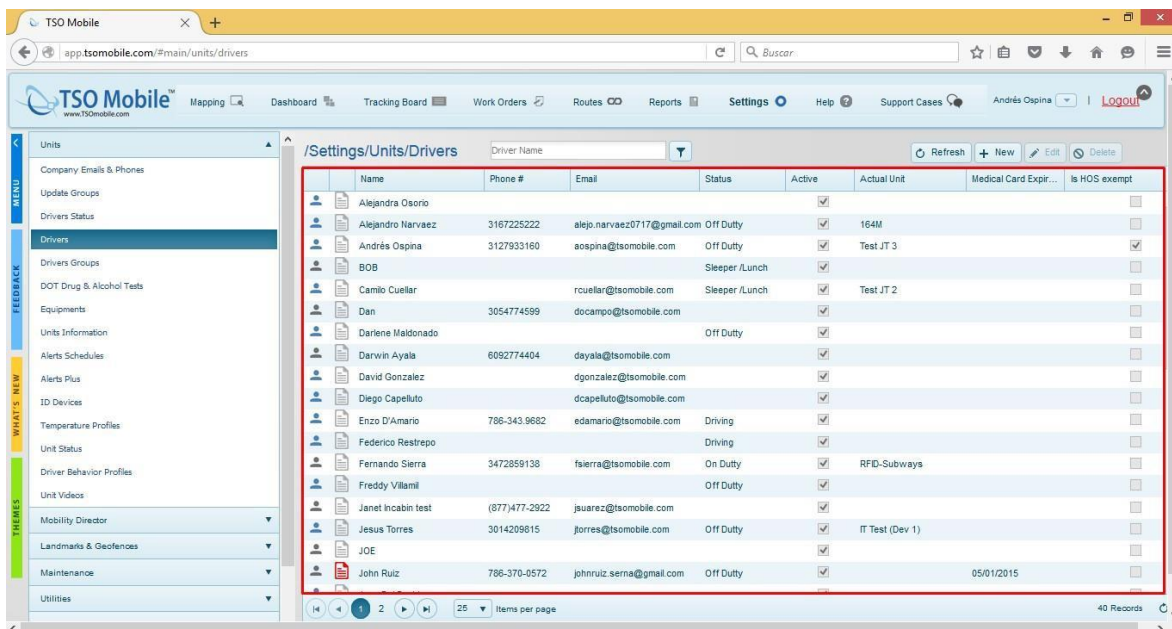

In the left pane that appears select Units.

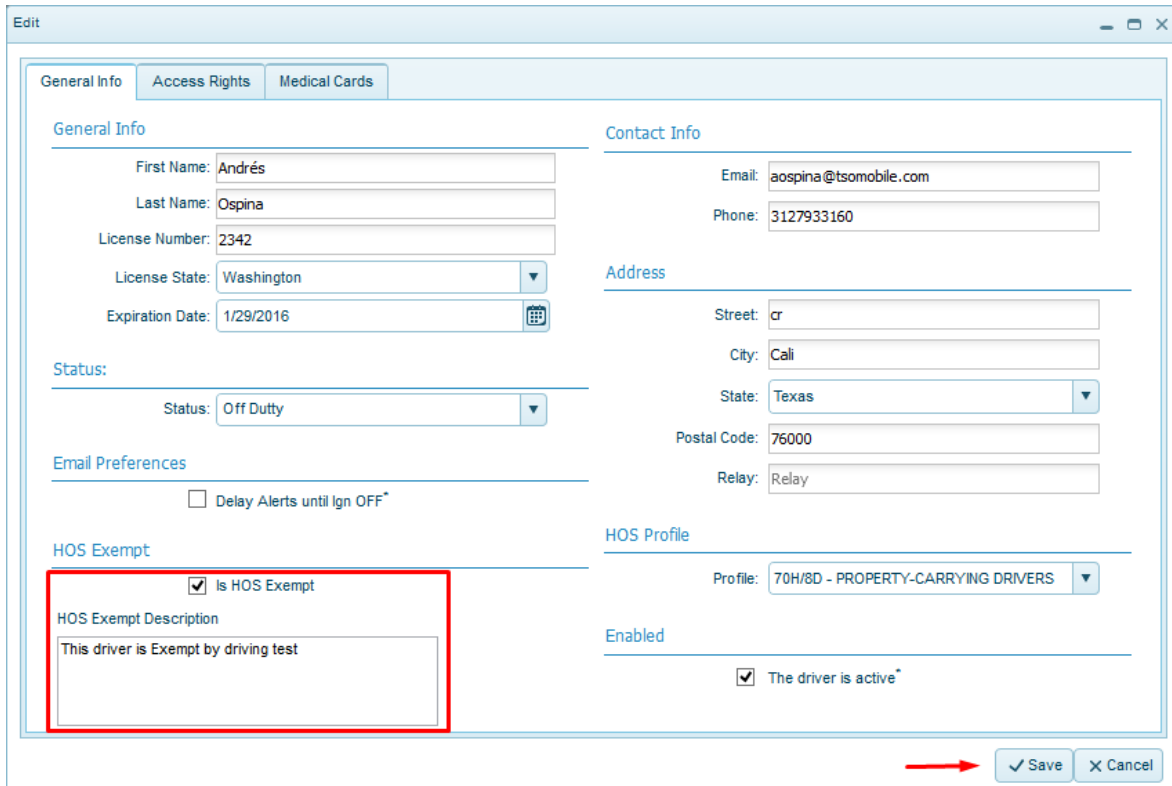

It will display a list where the Drivers option must be selected.

Now you must select the previously created Driver which you wish to enable it as Driver Exempt.

Once selected, a window appears with the Driver information, the bottom box should be marked "HOS is Exempt" and in the box below place a brief description of why the Driver is Exempt, finally press the "Save" button.

A message that indicates that the Driver has been successfully saved.
